- Tube Bending
- Tube Hydroforming
- End Forming
- Vacuum Impregnation
- Contract Assembly
- Spot Welding
- Stamping
- Controlled Atmosphere Brazing
- Wire Forming
- Harness Assembly
- Machine Turning
- Injection Molding

Contract Manufacturing Pros & Cons

As one of Mexico's premier contract manufacturing companies, we obviously think that the "pros" of contract manufacturing outweigh the "cons."

Pros

MAXIMIZE PROFITS: The biggest – and arguably best – benefit of contract manufacturing is that it maximizes the producer's profits. By outsourcing to a contract manufacturer, your company can focus on a specific set of tasks and figure out how to maximize each.

FLEXIBILITY: When your company owns a manufacturing facility and employs a manufacturing workforce, changing raw material suppliers, logistics companies or the even the rate of production can be disruptive and costly. Contract manufacturing can solve these problems and provide you with the advantage of flexibility.

MORE FOCUS ON YOUR CORE BUSINESS: Manufacturing is complicated and challenging. From acquiring the raw materials, to shipping logistics, to equipment maintenance, there are a lot of potential failure points along the way. Going with a contract manufacturer who has these processes already perfected allows you to focus on sales, product development and marketing.

Contract Manufacturing Pros & Cons

Cons

Great Contract Manufacturers Are Hard To Find - It's absolutely correct to say that hiring a good contract manufacturing company is hard. What's more, if a bad contract manufacturer is hired, all sorts of things can go wrong:

- Random fluctuations in the delivery of promised product
- Sudden and inexplicable shutdowns that are highly disruptive
- Quality problems
- Conflicts about pricing and cost adjustments and raw material quality concerns

Conclusion

If your company can live with the small risks associated with contract manufacturing, the rewards are great. By contracting out manufacturing, you make your business as flexible as possible, maximize profits, and eliminate a lot of headaches.

If we've convinced you that contract manufacturing is the way to go, we're happy to discuss the parameters of your manufacturing project and to see if Intran is a good fit for your needs.

About Intran

At Intran, we are committed to supplying products, processes, and services that comply with our customers' specifications. Our top priority is the happiness of our customer. We strive to deliver on time while also providing the highest quality . In fact, we are IATF 16949:2016 and ISO 9001:2015 certified.

Quality Certified

At Intran, we continuously strive to exceed our customers' quality expectations. We are IATF 16949:2016 and ISO 9001:2015 certified, and our own in-house Quality Assurance Program works continuously to reduce costs.

IATF 16949:2016

The IATF 16949:2016 is one of the world's most used set of standards for quality management in automotive products and covers every aspect of the production process.

ISO 9001:2015

The ISO (International Organization for Standardization) publishes standards for many industries, including auto parts manufacturing that establish clear and consistent processes that optimize production and quality.
